

Information Sheet

New South Wales Class 2 Safety Productivity & Environment Construction Transport Authorisation Notice 2016 (No. 1)

Summary

The New South Wales Safety Productivity & Environment Construction Transport Scheme (SPECT Scheme) is an initiative of the New South Wales government intended to improve the safety, environmental performance and productivity of heavy vehicles used by the construction industry in NSW.

Under the HVNL the National Heavy NHVR has issued a notice to authorise specified eligible Class 2 PBS-approved heavy vehicles (nominated vehicles) which meet the further requirements of the Scheme to use approved roads and routes.

The *New South Wales Class 2 Safety Productivity & Environment Construction Transport Authorisation Notice 2016 (No.1)* supports the SPECT Scheme by authorising eligible vehicles to use the New South Wales SPECT Scheme Network.

Background

Under SPECTS, Roads and Maritime Services (Roads and Maritime) will enrol nominated vehicles to authorise their movement by participating heavy vehicle operators on the network identified in the Notice. Participation in SPECTS is subject to the conditions contained in the SPECTS Business Rules.

The *New South Wales Class 2 Safety Productivity & Environment Construction Transport Authorisation Notice 2016 (No.1)* provides an enrolled operator's nominated vehicles with greater access to a prescribed network in return for greater compliance requirements.

Purpose of this Notice

This notice provides the authorisation for vehicles to use the networks developed and administered under the SPECT Scheme. Operators should refer to the SPECT Business Rules and other information published by RMS to determine if they are eligible for access under the scheme.

Special Note: current enrolment in the SPECT Scheme is a condition of access under this notice.

Full information on the Scheme can be found on the NSW Roads and Maritime Service website at <http://www.rms.nsw.gov.au/spects>.
